Education

University of California, Berkeley

B.A. in Data Science, Domain Emphasis: Linguistic Sciences | GPA: 3.6

Berkeley, CA

May 2024

Experience

Mazlo

Full-Stack Software Engineer

October 2025 – present

Walnut Creek, CA

- Built an agreements tracking system across Python backend and Flutter frontend, allowing users to link platform, external, and payment requests transactions to agreements, automatically tracking total spent against the agreement amount and eliminating the need for manual spreadsheets.
- Shipped self-service card dispute feature, enabling customers to dispute transactions, upload documents, and track status directly in-app, eliminating the need for Customer Success to manually handle every dispute.
- Automated physical check processing, eliminating over 100 handwritten checks and saving 8 hours of internal effort per month while enabling customers to send checks instantly.
- Redesigned contact filtering and classification system to create targeted exports, enable user segmentation, and filter by transaction history for donor management and compliance reporting.

Allstate Protection Plans

Software Engineer Intern

June 2022 – August 2022

Brisbane, CA

- Developed a full-stack Shopify app using React and Node.js that reduces merchant onboarding time from 3 months to 15 minutes, targeting a \$1-1.5 billion market opportunity.
- Built a product cataloging and webhook billing system using GraphQL and REST APIs to dynamically generate warranty products on merchant stores and capture real-time purchase data.

University of California, Berkeley

Academic Intern

January 2021 – May 2021

Berkeley, CA

- Taught weekly lab sections for 20+ students in Data Structures (Java), focusing on algorithms and time complexity.
- Assisted students with debugging code and provided conceptual guidance to deepen understanding.

Software Projects

Movie Matcher

- Developed a movie recommendation system with React, TypeScript, Node.js, and PostgreSQL that delivers personalized movie suggestions using machine learning algorithms.
- Optimized performance with Redis caching, reducing response times to under 2ms while handling real-time updates and secure user authentication.

Turnip Trader

- Built an AI-powered Animal Crossing trading assistant (React, TypeScript, Node.js, Express) that simulates weekly turnip prices and provides LLM-generated selling advice as the in-game character Isabelle.
- Integrated OpenAI GPT models with Retrieval-Augmented Generation (RAG) using PostgreSQL + pgvector to retrieve and apply community trading strategies.

PetRealm

- Developed a full-stack virtual pet game using React, Node.js, Express, and PostgreSQL (AWS RDS) with dynamic pet care mechanics.
- Automated gameplay events with AWS Lambda and EventBridge and deployed via Vercel with CI/CD pipelines.
- Created and maintained Vitest unit tests and Playwright end-to-end test suites with GitHub Actions to automate testing and deployment.

Technical Skills

Languages: JavaScript, TypeScript, Python, Dart, Java, SQL

Frameworks: React, Node.js, Express.js, Flutter, GraphQL, REST APIs

DevOps/Tools: GitHub Actions, AWS (Lambda, EventBridge, RDS), Docker

Databases: PostgreSQL, MongoDB, Redis

AI/ML: Retrieval-Augmented Generation (RAG), pgvector
