PROFESSIONAL SUMMARY

Full-Stack Software Engineer with a background in Data Science and Linguistics, proficient in JavaScript, TypeScript, React, Node.js, and PostgreSQL. Experienced in CI/CD pipelines with GitHub Actions, automated testing, and serverless AWS applications. Skilled in building AI-powered applications with OpenAI GPT models, RAG systems, machine learning algorithms, and Redis caching.

EDUCATION

University of California, Berkeley

Berkeley, CA

B.A. in Data Science, Domain Emphasis: Linguistic Sciences | GPA: 3.6

May 2024

EXPERIENCE

Software Engineer Intern

June 2022 – August 2022

Allstate Protection Plans

Brisbane, CA

- Developed a full-stack Shopify app using React and Node.js that reduces merchant onboarding time from 3 months to 15 minutes, targeting a \$1-1.5 billion market opportunity.
- Built automated product cataloging and webhook billing system using GraphQL and REST APIs to auto-generate warranty products on merchant stores and capture real-time purchase data.

Academic Intern

January 2021 – May 2021

University of California, Berkeley

Berkeley, CA

- Taught weekly lab sections for 20+ students in Data Structures (Java), teaching algorithms and time complexity.
- Assisted students with debugging code and provided conceptual guidance to deepen understanding.

SOFTWARE PROJECTS

MovieMatcher

- Developed a movie recommendation system with React, TypeScript, Node.js, and PostgreSQL that delivers personalized movie suggestions using machine learning algorithms.
- Optimized performance with Redis caching, reducing response times to under 2ms while handling real-time updates and secure user authentication.
- Ensured quality and reliability by implementing Vitest unit tests, Playwright end-to-end tests, and automated CI/CD testing pipelines.

Turnip Trader

- Built an AI-powered Animal Crossing trading assistant (React, TypeScript, Node.js, Express) that simulates weekly turnip prices and gives LLM-generated selling advice in the voice of the in-game character Isabelle.
- Enhanced reliability with end-to-end test suites and automated CI/CD pipelines via GitHub Actions.
- Integrated OpenAI GPT models with Retrieval-Augmented Generation (RAG) using PostgreSQL + pgvector to retrieve and apply community trading strategies.

PetRealm

- Developed a full-stack virtual pet game using React, Node.js, Express, and PostgreSQL (AWS RDS) with dynamic pet care mechanics.
- Automated gameplay events with AWS Lambda and EventBridge and deployed via Vercel with CI/CD pipelines.
- Created and maintained Vitest unit tests and Playwright end-to-end test suites with GitHub Actions to automate testing and deployment.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, SQL, Python, Java, C, HTML, CSS

Frameworks/Libraries: React, Node.js, Express.js, GraphQL, REST APIs

DevOps/Tools: GitHub Actions (CI/CD), AWS (Lambda, EventBridge, CloudWatch, RDS), Docker

Databases: PostgreSQL, MongoDB, Redis

Testing: Vitest, Playwright, Supertest

AI/ML: OpenAI GPT models, Retrieval-Augmented Generation (RAG), pgvector
